

Diagonal Lashing

Diagonal Lashing may be used to create a freestanding structure.

- Begin by crossing two sticks into an 'X'.
- Make a clove hitch around both sticks where they cross, again leaving a tail to finish with a square knot.
- Wind the twine tightly four times through one half of the 'X'.
- Now do the same through the other half of the 'X'.
- Frap three times between the sticks
- and tie a square knot with the clove hitch tail.
